Day1 BlockChain Assignment

Q1 : What is your understanding of blockchain ?

Block Chain is a future technology which helps to maintain data with high security, verifiable , data transparency , Decentralized and main can achieve hacking less system technology.

Q2 : What is the core problem Blockchain trying to solve ?

The main aim of Block Chain technology is to solve problems facing with the internet like Authenticity , Security , need of powerful third party for trust by making strategic plans like kind of rewards.

Q3: what are the features which Bloch Chain will give u ?

Authenticity, Security , Tamperproof , Immutable Data maintainance.

Q4: What all things does Block Chain contains?

Every Block in Block chain contains
1) Block Number
2) Previous signature
3) Transaction records
4) Mining key

Q5: How is verifiability of the block chain has been attained ?

The verifiability of the block in Block Chain can be attained by verifying with SIGNATURE.
In a Block Every form contains its own signature would be distributed with trusted people . If one changes the data , can get to know by verifying signature.
